

NON-TOXIC NOT STICKY NO SOLVENTS NO SILICONE WATER REPELLENT

LEATHER *Honey*™

Thank you for your order!

Leather Honey™ is the premium leather conditioner. Since it was invented in 1968, Leather Honey has been used to rejuvenate and recondition old leather and soften and protect new leather. Made in the USA and sold by the same family for over 25 years as Harness Honey, our non-toxic, water-repellent formula penetrates deep into leather's pores and prolongs the life of saddles and tack; boots, gloves and apparel; leather furniture and upholstery; sports equipment; and automobile and motorcycle seats and accessories. It softens, protects and promotes flexibility, leaving your leather feeling and looking luxurious.

DIRECTIONS FOR USE:

1. Protect your floor or counter with newspaper
2. If it is dirty, clean the surface of your leather (new leather does not need to be cleaned).
3. Let the leather dry completely after cleaning.
4. Kill any existing mildew using a combination of apple cider vinegar and water.
5. Test the Leather Honey in a small, discreet area first. This is important, even if you've applied Leather Honey to other items with great success. Leather is a natural material, and each piece may react differently to a conditioner.
6. Use a lint-free cloth, paint brush or foam sponge to apply Leather Honey to the leather at room temperature. Remember: A little Leather Honey goes a long way!
7. Allow time for the Leather Honey to absorb, and wipe off any excess with the lint-free cloth.
8. Let dry
9. Repeat process if leather is extremely dry, damaged or cracked.
